PROFESSIONAL SUMMARY

- Master's student in Artificial Intelligence at Johannes Kepler University Linz with strong experience building production-ready AI-powered and full-stack systems. Skilled in Machine Learning, Deep Learning, AI application development, scalable backend systems, and cloud-based deployments using PyTorch, Python, React, Next.js, React Native, Django, and AWS.
- Experienced in translating technical and business requirements into reliable software solutions, with hands-on experience in model development, AI integrations, real-time systems, and scalable application architecture. Passionate about AI engineering, LLM-powered systems, intelligent automation, computer vision, and deploying practical AI solutions in production environments.
- Open to full-time, graduate, and internship opportunities within AI Engineering, AI Solutions Engineering, and AI Product Engineering, Petroleum Engineering.

TECHNICAL SKILLS

AI / Machine Learning: PyTorch, Machine Learning, Deep Learning, Neural Networks, Computer Vision, Transfer Learning, Model Training & Evaluation, Data Preprocessing, Time-Series Analysis, AI System Development.

Languages & Frameworks: Python, JavaScript (ES6+), TypeScript, C++, SQL, React, Next.js, React Native, Django, Flask, FastAPI, Node.js, GraphQL.

Cloud & DevOps : AWS (S3, RDS, Elastic Beanstalk), Docker, Kubernetes, Git, GitHub Actions, CI/CD .

Frontend & Product Engineering: Tailwind CSS, Three.js, React Three Fiber, Framer Motion, Responsive UI Development, Cross-Platform Application Development.

Backend & Data: PostgreSQL, Appwrite, REST APIs, WebSockets, Real-Time Systems.

Testing & Engineering Practices: Detox, Cypress, Version Control, Production Deployment, API Integration, Scalable System Design .

WORK EXPERIENCE

Software Engineer & E-commerce Operations Lead | Kids Multicultural World.

Remote (USA) | April 2019 – January 2025

Kids Multicultural World is a multicultural e-commerce and educational platform serving customers across multiple regions through scalable digital solutions.

Achievements:

- Built and maintained scalable production systems supporting large volumes of product and customer traffic.

- Improved system performance and scalability, significantly reducing load times and improving user experience.
- Helped scale the business to over \$20K monthly revenue through platform optimization and technical improvements.
- Implemented SEO, performance optimization, and structured frontend/backend improvements.
- Worked across frontend, backend, deployment, and operational workflows in a fast-paced startup environment.

Software Engineer | Mayrian

Mayrian is a digital solutions company focused on building scalable and high-performance web applications for businesses and clients.

Remote | July 2024 – December 2024

Achievements:

- Migrated applications to Next.js and optimized hosting infrastructure, reducing annual infrastructure costs by over €2,000.
- Developed secure, scalable, and production-ready applications for clients.
- Resolved legacy system issues and improved application reliability and maintainability.
- Collaborated closely with designers and engineers to deliver high-quality technical solutions.
- Mentored junior developers and promoted engineering best practices.

Full Stack Developer | CT Digital

CT Digital is a global digital agency that combines design and technology to build digital products and experiences for brands worldwide. Joined during the company's startup phase and contributed to building its digital presence and development processes from the ground up.

Remote Contract | November 2021 – June 2022

Achievements:

- Collaborated with designers and developers to transform UI/UX concepts into responsive web applications.
- Participated in front-end architecture and reusable component development.
- Contributed to branding and digital presence strategy during the early growth stage of the company.
- Worked on responsive design optimization and cross-browser compatibility.
- Assisted in integrating APIs and dynamic content into web platforms.
- Contributed to testing, debugging, and performance optimization of web applications.
- Participated in client projects involving website development and user experience improvements.
- Helped streamline development workflows and improve collaboration between design and engineering teams.
- Supported deployment, updates, and ongoing maintenance of digital products and websites.

Engineering Intern | Warri Refining and Petrochemical Company (WRPC)

Warri Refining and Petrochemical Company (WRPC) is one of Nigeria's major refining and petrochemical processing facilities. 4-Month Internship.

September 2019 – December 2019

Achievements:

- Assisted engineering teams in operational and technical activities within refinery processes.
- Gained exposure to industrial systems, process operations, safety procedures, and engineering workflows.
- Worked within multidisciplinary teams in a large-scale industrial environment.

Web Development Tutor and IT specialist | Premier Academy Lugbe

Worked as a Web Development Tutor at Premiere Academy, a prestigious international boarding secondary school in Lugbe, Abuja, known for academic excellence, leadership development, and technology-driven education. Mentored and trained over 300 students in web development and coding concepts.

April 2022 – February 2023

Achievements:

- Taught over 300 students web development fundamentals including HTML, CSS, JavaScript, and responsive design.
- Delivered engaging practical coding sessions and project-based learning activities.
- Mentored students in problem-solving, debugging, and software development best practices.
- Simplified technical concepts for students of different learning levels and backgrounds.
- Assisted students in building interactive websites and improving their programming confidence.
- Contributed to promoting ICT and coding education within the school's technology-focused learning environment.

PROJECTS

[Car Detection Webapp](#) [ML Engineer] - Developed a deep learning computer vision model using the Stanford Cars dataset (196 classes), to detect different car models and types. Implemented transfer learning using ResNet50 and applied augmentation techniques to improve model generalization. Built an inference pipeline for image-based real-time predictions. Built into a web app for easy use.

[Maurian](#) [Lead Software Developer] - A digital transformation platform that helps businesses build custom software solutions, mobile and web applications, UI/UX experiences, e-commerce systems, and AI-driven digital products to improve business operations and customer engagement.

[KidsMulticulturalWorld](#) [Lead Software Developer] - A multicultural youth development platform that empowers children through leadership training, fashion, modeling, acting, mentorship, magazine features, and global cultural programs designed to build confidence, creativity, and self-expression.

[superstarkids](#) [Full-Stack Developer] - A fashion competition platform where kids showcase their fashion styles and receive public votes through paid voting, giving participants the opportunity to be featured in the USA Super Star Kids Magazine.

[CT Digital](#) [Web Developer] - A digital agency platform that helps brands build impactful online experiences through modern website development, creative design, and technology-driven digital solutions tailored for business growth and user engagement.

[Nairafolio](#) [Full-Stack Developer] - This is a cross-platform fintech mobile application that enabled users to buy and sell shares, transfer assets, and manage NGN/USD savings, while integrating secure authentication, transaction logging, REST APIs, WebSocket-based real-time updates, scalable navigation architecture, Redux Toolkit state management, and responsive accessible user interfaces.

More open-source projects are available on GitHub - <https://github.com/RucksollyTech>.

EDUCATION & QUALIFICATIONS

[JKU - Johannes Kepler Universität Linz, Austria](#) - **M.Sc Artificial Intelligence** [in view]

March 2025 – Present Expected Graduation: July 2027.

[The Federal University of Technology, Owerri](#) - **B.Eng Petroleum Engineering** [2021].

[Udemy](#) - **The Ultimate Authentication Course with Django and React** [2023] - Focused on mastering authentication and authorization in full-stack web applications using Django, React, JWT, user management, protected routes, and secure backend API integration. [Certificate url.](#)

[Udemy](#) - **Django with React | An Ecommerce Website** [2023] - Focused on building full-stack ecommerce applications using Django, React, REST APIs, product management, authentication, shopping cart functionality, and payment integration. [Certificate url.](#)

[Udemy](#) - **Complete Next.js Developer in 2023: Zero to Mastery** [2023] - Focused on building modern full-stack web applications with Next.js, React, TypeScript, server-side rendering, API routes, authentication, and scalable frontend architecture. [Certificate url.](#)

[Udemy](#) - **Reinforcement Learning beginner to master - AI in Python** [2026] - Focused on reinforcement learning concepts and AI development in Python, including Markov Decision Processes (MDPs), Monte Carlo methods, temporal difference learning, Deep Q-Learning, Deep SARSA, neural networks, and implementing reinforcement learning algorithms from scratch. [Certificate url.](#)

[Udemy](#) - **PyTorch: Deep Learning and Artificial Intelligence** [2026] - Focused on deep learning and artificial intelligence using PyTorch, including Artificial Neural Networks (ANNs), CNNs, RNNs, NLP, computer vision, GANs, recommender systems, transfer learning, time series forecasting, stock prediction, and deep reinforcement learning applications. [Certificate url.](#)
